

Citrix – Allow Full Access to Local Drive

For most versions of the Citrix plugins we use (and there are multiple versions), once you are connected there is an icon that shows up in the System Tray of Windows, by the clock.

To change the file access setting:

Log into the XenApp page (farinapps.farin.com or iprice.farin.com) on the machine which has the file access setting set up wrong

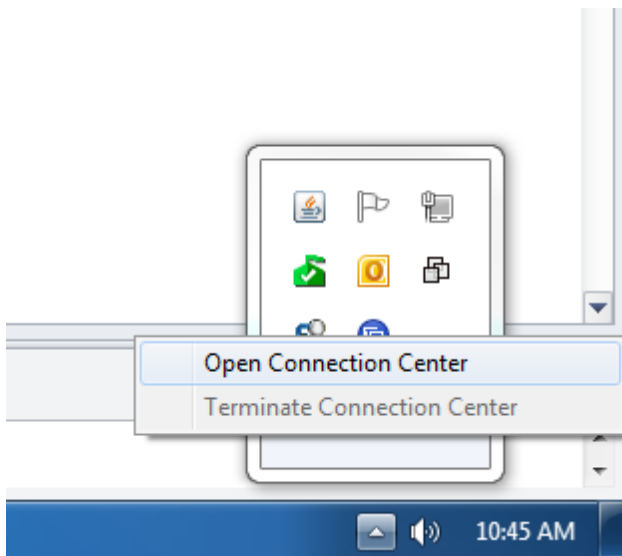

Launch the application

Right mouse click on the Citrix Connection Center icon, and select Open Connection Center

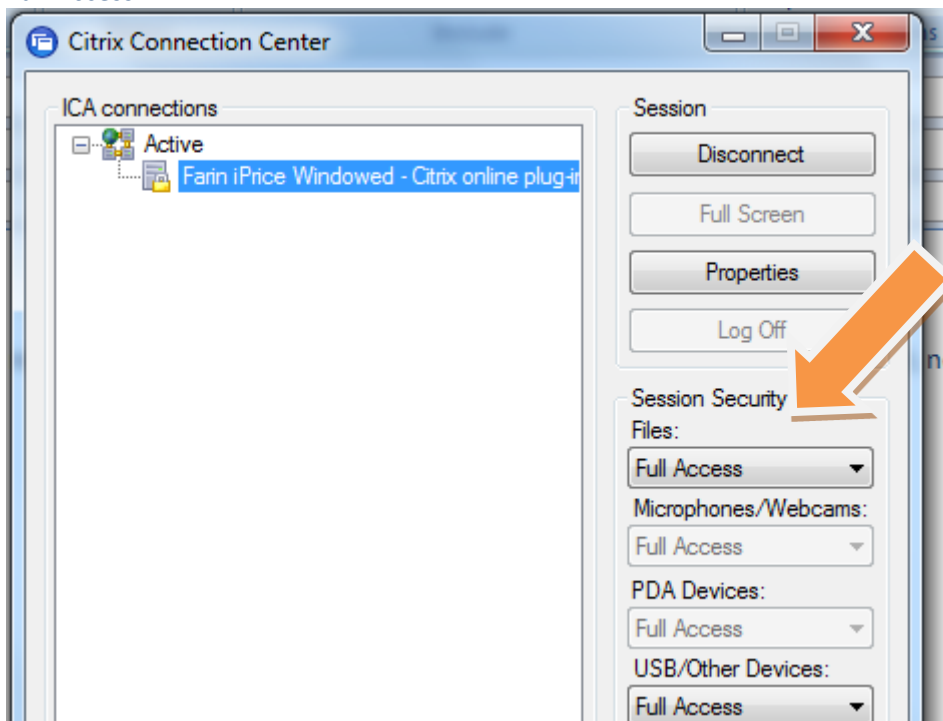

- or -

Highlight the ICA connection for the application you are using, adjust the "Session Security – Files:" setting to Full Access

Please note: other versions may require other methods:
